

Guidelines for Project Proposals

In order to minimize the processing time in the evaluation of your submitted project proposal, please check that your project description features the following information and layout:

1. Cover page with project title, author(s) and affiliation including head of laboratory (PI).
2. Summary (less than 200 words) => will appear in the yearly FGCZ report.
3. Project description with a brief introduction and the project layout.
4. Experimental design and requested technologies and/or support and training.
5. References.
6. Sources of project financing and/or evaluation.

For User Lab projects asking to access microarray services, a shortened version consisting of a cover page and the summary, as well as an outline of the experimental design is sufficient.

Please use standard fonts only (Arial, Helvetica, Courier, Times) and send your file as a PDF or Word document as an e-mail attachment.
