
Info Sheet: Metabolomics / Lipidomics User Lab

General description

User Lab access can be given to the whole metabolomics laboratory infrastructure and to all MS systems. Introduction and support can be given to sample processing, instrument operation and data analysis.

It is expected that the users develop the skills to run the analyses and to process the data themselves in short time and with minimal support from the metabolomics staff. The development of the research question as well as the interpretation of the results are in the hands of the accessing user and the responsible supervisors.

Requirements

- User Lab access is open for post doc scientists with practical experience in analytical chemistry and / or GC/LC-MS operation
- PhD students working as part of their thesis on a metabolomics project or a metabolomics method development might be eligible too
